

# ANTONY PETER

Full-Stack Software Engineer | AI Integrations

Nairobi, Kenya | antonypeter.dev@gmail.com | +254 741 052 614

antonypeter.vercel.app | linkedin.com/in/antony-peter-96318a338 | github.com/antoniodemax

## PROFESSIONAL SUMMARY

Full-stack software engineer and Moringa School software engineering graduate building production web applications with React, Next.js, TypeScript, Node.js/Express, PostgreSQL, Supabase and Convex. Shipped features on a production SaaS platform, including streaming AI assistant responses (OpenAI API), Paystack subscriptions and end-to-end encrypted messaging fixes. Builds AI-integrated products using large language model (LLM) APIs, including Anthropic Claude, OpenAI and NVIDIA models, and won 1st place at a Claude hackathon with an AI learning platform, and placed 4th overall at the Fable 5.1 Build Night. Delivers full-stack systems for clients, including e-commerce and M-Pesa Daraja payment integrations, and applies secure development practices across authentication, authorization and data access.

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript, SQL, HTML, CSS

**Frontend:** React, Next.js (App Router), Vite, Tailwind CSS, shadcn/ui, Framer Motion, React Router, Zod, Progressive Web Apps (PWA), responsive and mobile-first UI

**Backend & APIs:** Node.js, Express, REST APIs, Convex, Supabase Edge Functions, Vercel Serverless Functions, server-sent events (SSE), webhooks

**Databases:** PostgreSQL, Supabase (Row Level Security, migrations, RPC, Realtime), Convex, SQLite, Redis

**AI & LLM Integration:** Anthropic Claude API, OpenAI API (streaming chat), NVIDIA AI (Cosmos Reason, Nemotron), LangGraph, prompt engineering, structured outputs, AI-assisted development (Claude Code)

**Payments & Auth:** M-Pesa Daraja STK Push, Paystack (subscriptions, webhooks), Clerk, Google OAuth 2.0, JWT, bcrypt, Passport.js

**Security:** Authentication and authorization, role-based access control (RBAC), session security, CSRF protection, rate limiting, server-side access control

**Testing & Tools:** Git, GitHub, Playwright, Vitest, Vercel, Render, Bun, pnpm, Linux (Ubuntu), Figma

## WORK EXPERIENCE

### Full-Stack Developer (Contributor), Kaizen Afrika (formerly Crevia)

Apr 2026 – May 2026

AI-powered business platform for independent creatives and B2B brands | React, TypeScript, Supabase, OpenAI API, Paystack, Vercel

- Implemented streaming responses for the in-app AI assistant by switching the OpenAI call in a Supabase Edge Function to server-sent events and rendering tokens live in the chat interface.
- Added persistent cross-session assistant memory and chat management (pin, rename, delete) for desktop and mobile, backed by database migrations.
- Integrated Paystack subscription payments end to end, including webhook logic that resets plan limits on subscription expiry or cancellation.
- Moved AI usage limits to an atomic server-side database function, eliminating a client-side race condition that caused failed requests.
- Resolved production authentication issues: centralized protected routes, fixed Google OAuth redirect loops and signup errors, and corrected CORS configuration for Vercel deployments.
- Fixed cross-device key synchronization and unintended key rotation in end-to-end encrypted messaging, and built realtime notifications using database triggers.

### Independent Full-Stack Developer, Self-employed

Jun 2025 – Present

- Design, build and deploy websites and web applications for businesses and organizations, covering requirements, UI design, APIs, databases, authentication, payments and hosting.
- Delivered a full-stack e-commerce platform for a handbag boutique (see Projects); currently building a beat marketplace website with customer and admin dashboards for a music producer.

## HACKATHON PROJECTS & AWARDS

### Elimu Mtaani — AI Learning Platform for Kenyan CBC Classrooms

1st Place

Claude Hackathon | 1st Place | github.com/jarviswuod/elimuMtaani

Next.js, React, TypeScript, Convex, Clerk, Anthropic Claude API, Tailwind CSS, Playwright

- Led development (21 of 24 commits) of a team hackathon project that turns an uploaded curriculum source into a term timetable, narrated slide lessons, quizzes and classroom games generated with the Anthropic Claude API.
- Built role-based teacher and student experiences with Clerk authentication, a 9-table Convex data model, analytics dashboards, notes, a leaderboard and a lesson-scoped AI tutor chat.
- Implemented server-side text extraction from PDF, DOCX, PPTX, CSV and XLSX files, voice input and narration with the Web Speech API, and Playwright end-to-end tests; designed the data model so no individual learner scores or identities are stored.

## Smart Fundis — Verified-Fundi Marketplace

Sep 2026

GOMYCODE × NVIDIA "Come Build with AI" Hackathon | [smart-fundis.vercel.app](https://smart-fundis.vercel.app) | [github.com/simpleHacker0893/smart-fundis](https://github.com/simpleHacker0893/smart-fundis)  
*Next.js, TypeScript, Tailwind CSS, shadcn/ui, Convex, Clerk, Vercel, FastAPI, LangGraph, NVIDIA Cosmos Reason 2, NVIDIA Nemotron, NVIDIA Brev*

- Team project built in one day: a mobile-first PWA where Kenyan tradespeople (fundis) prove their skills with a short phone video, NVIDIA AI reviews the work step by step against a skills rubric, and a human expert gives final approval before a verified badge is issued.
- Architecture pairs a Next.js and Convex app (real-time status, file storage, role-based fundi, expert and admin dashboards) with an AI pipeline on an NVIDIA Brev H100 that runs Cosmos Reason 2 for video analysis and Nemotron for structured feedback in English and Kiswahili.
- Designed responsible-AI safeguards: a handwritten liveness code to prevent reused videos, safety steps that are never auto-passed, AI that can lower but never raise a verdict, and bilingual consent before any upload.
- Contributed code to the team repository using a spec-driven, AI-assisted workflow: architecture decision records (ADRs), vertical slices, test-first development with Vitest, Playwright and pytest, and human-reviewed pull requests built with Claude Code agents.

## Kada ya Moko — AI Desktop Coworker

Sep 2026

Fable 5.1 Build Night (Claude Community Kenya, Hackhouse Africa) | 4th Overall, 2nd in Everyday Track | [github.com/antoniodemax/kada-ya-moko](https://github.com/antoniodemax/kada-ya-moko)

- Team project: a desktop AI coworker, positioned as a developer's chief of staff ("mtu wa mkono"), that tackles developers' "six-tab problem" (Slack, GitHub, Gmail, Calendar, terminal and AI chat) by orchestrating tasks, keeping plan and context in one place and choosing the model and effort level per task.
- Demoed the working product live to judges as a team, placing 4th overall and 2nd in the Everyday Track.

## PROJECTS

### Millux Collections — Full-Stack E-Commerce Platform

[milluxcollections.vercel.app](https://milluxcollections.vercel.app)

*React, TypeScript, Tailwind CSS, Framer Motion, Node.js, Express, PostgreSQL*

- Built a complete online store (shop, collections, product detail, cart, customer profile and order history) backed by an Express + TypeScript REST API and PostgreSQL with versioned SQL migrations.
- Implemented customer and admin authentication with Google OAuth 2.0, JWT and bcrypt, plus an admin dashboard for products, categories, customers and orders, with image uploads and Zod request validation.
- Added a cart-to-WhatsApp ordering flow, SEO metadata and mobile UX improvements; deployed the frontend on Vercel and the API on Render.

### Simply Feminine Network — NGO Website & M-Pesa Donations

[github.com/antoniodemax/simplyfemininenetwork](https://github.com/antoniodemax/simplyfemininenetwork)

*React, TypeScript, Vite, Tailwind CSS, Framer Motion, Express, SQLite, M-Pesa Daraja API, Figma*

- Designed in Figma and built a responsive website presenting an NGO's mission, programs, events and partners, prepared as a proposal for the organization.
- Built an Express + TypeScript donation API integrating M-Pesa Daraja STK Push (OAuth access token, payment prompt, callback handling), with SQLite records tracking pending, successful and failed donations; in sandbox testing.

## EDUCATION

### Moringa School, Nairobi, Kenya

Nov 2024

Certificate of Completion, Software Engineering (Front-End and Back-End Programming); includes curriculum content from Flatiron School

## CERTIFICATIONS

Introduction to Cybersecurity — Cisco Networking Academy (verified digital badge, Credly)

Prompt Like an Engineer — Cisco Networking Academy (verified digital badge, Credly)
