PROFESSIONAL SUMMARY

Full-stack software engineer and Moringa School software engineering graduate, building web applications with React, Next.js, TypeScript, Node.js/Express, PostgreSQL and Supabase. Has shipped features on a production SaaS platform, including streaming AI assistant responses (OpenAI API), Paystack subscriptions and fixes to end-to-end encrypted messaging; led development of an AI learning platform built on the Anthropic Claude API; and has built full-stack systems for clients, including an e-commerce platform and an NGO website with M-Pesa Daraja donations. Applies secure development practices across authentication, authorization and data access, supported by Cisco Networking Academy training in cybersecurity.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, HTML, CSS

Frontend: React, Next.js (App Router), Vite, Tailwind CSS, Framer Motion, React Router, Zod, responsive and mobile-first UI

Backend & APIs: Node.js, Express, REST APIs, Convex, Supabase Edge Functions, Vercel Serverless Functions, Clerk, Passport.js

Databases: PostgreSQL, Supabase (Row Level Security, migrations, RPC, Realtime), SQLite, Redis

Integrations & AI: Anthropic Claude API, OpenAI API (streaming chat), prompt engineering, Paystack (subscriptions, webhooks), M-Pesa Daraja STK Push, Google OAuth 2.0

Security: Authentication and authorization (OAuth 2.0, JWT, bcrypt), session security, CSRF protection, rate limiting, server-side access control

Tools & Deployment: Git, GitHub, Playwright, Vercel, Render, Linux (Ubuntu), AI-assisted development tools

EXPERIENCE

Full-Stack Developer (Contributor), Kaizen Afrika (formerly Crevia)

Apr 2026 – May 2026

AI-powered business platform for independent creatives and B2B brands | React, TypeScript, Supabase, Vercel

- Implemented streaming responses for the in-app AI assistant by switching the OpenAI call in a Supabase Edge Function to server-sent events and rendering tokens live in the chat interface.
- Added persistent cross-session assistant memory and chat management (pin, rename, delete) for desktop and mobile, backed by database migrations.
- Integrated Paystack subscription payments end to end, including webhook logic that resets plan limits on subscription expiry or cancellation.
- Moved AI usage limits to an atomic server-side database function, eliminating a client-side race condition that caused failed requests.
- Resolved production authentication issues: centralized protected routes, fixed Google OAuth redirect loops and sign-up errors, and corrected CORS configuration for Vercel deployments.
- Fixed cross-device key synchronization and unintended key rotation in end-to-end encrypted messaging, and built realtime notifications using database triggers.

Independent Full-Stack Developer

Jun 2025 – Present

Self-employed | Nairobi, Kenya

- Design, build and deploy websites and web applications for businesses and organizations, covering requirements, UI design, APIs, databases, authentication, payments and hosting.
- Built an e-commerce platform for a handbag boutique and a website with an M-Pesa donation backend for a women-focused NGO (see Projects); currently building a website and admin dashboard for a music production studio.

PROJECTS

Elimu Mtaani — AI Learning Platform for Kenyan CBC Classrooms

github.com/jarviswuod/elimuMtaani

Next.js, React, TypeScript, Convex, Clerk, Anthropic Claude API, Tailwind CSS, Playwright

- Led development (21 of 24 commits) of a team hackathon project that turns an uploaded curriculum source into a term timetable, narrated slide lessons, quizzes and classroom games generated with the Anthropic Claude API.

- Built role-based teacher and student experiences with Clerk authentication, a 9-table Convex data model, analytics dashboards, notes, a leaderboard and a lesson-scoped AI tutor chat.
- Implemented server-side text extraction from PDF, DOCX, PPTX, CSV and XLSX files, voice input and narration with the Web Speech API, and Playwright logic and end-to-end tests; designed the data model so no individual learner scores or identities are stored.

Millux Collections — Full-Stack E-Commerce Platform

milluxcollections.vercel.app

React, TypeScript, Tailwind CSS, Framer Motion, Node.js, Express, PostgreSQL

- Built a complete online store (shop, collections, product detail, cart, customer profile and order history) backed by an Express + TypeScript REST API and PostgreSQL with versioned SQL migrations.
- Implemented customer registration and login and admin sign-in with Google OAuth 2.0, JWT and bcrypt, plus an admin dashboard for managing products, categories, customers and orders, with image uploads and Zod request validation.
- Added a cart-to-WhatsApp ordering flow, SEO metadata and mobile UX improvements; deployed the frontend on Vercel and the API on Render.

Simply Feminine Network — NGO Website & M-Pesa Donations github.com/antoniodemax/simplyfemininenetwork

React, TypeScript, Vite, Tailwind CSS, Framer Motion, Express, SQLite, M-Pesa Daraja API

- Designed the website in Figma and built it in React, presenting the organization's mission, programs, events and partners with responsive, animated sections.
- Built an Express + TypeScript donation API integrating M-Pesa Daraja STK Push (OAuth access token, payment prompt, callback handling), with SQLite records tracking pending, successful and failed donations; currently in sandbox testing.

POS Supermarket System — Team Project

github.com/flavian-jumba/POS-supermarket

PHP, Laravel, Filament, Livewire, M-Pesa Daraja API

- Collaborated on a multi-branch supermarket point-of-sale system covering sales, inventory, organizations, branches and M-Pesa payments.
- Fixed the supermarket onboarding flow by correcting registration routing and workspace-selection logic, and extended the feature test covering the flow.

EDUCATION

Moringa School, Nairobi, Kenya

Nov 2024

Certificate of Completion, Software Engineering (Front-End and Back-End Programming)

- Full-stack software engineering program delivered by Moringa School, including curriculum content from Flatiron School.
